

ACCESS MYPILOT® IN TRANSFLO MOBILE

Everyone knows time is money. And drivers save time with new myPilot® cardless fueling and diesel lane wait times in Transflo Mobile.

Main Menu Access to myPilot®

In addition to using the industry's most comprehensive functionality in Transflo Mobile, drivers conveniently access myPilot® from the main menu. Once registered, they are then taken to screens that display wait times for diesel lanes and authorize the fuel payment. It's another example of the **open architecture and extendable platform** of Transflo Mobile.

Estimated Fuel Lane Wait Times

Information typically entered at the pump can now be entered in the app – and saved for future use – prior to arriving at the travel center. As they arrive at the travel center, a **virtual geofence automatically activates the myPilot® features**. Drivers can see estimated wait times of fuel lanes and choose the lane that is most likely to open up first.

Cardless Fueling with Pin Code

When they are ready to fuel, drivers are given a pre-authorized pin code to activate the pump. The secure, cardless payment **works with all major trucking fuel card companies**, with no difference in current reporting of transaction types. Drivers receive in-app fuel receipts and complete all tasks in one solution. Time saved, hassle avoided!
